

Arctic Blast Fan

55" & 72" Fiberglass Circulation

FARMER BOY®

 **ARCTICAIR®**

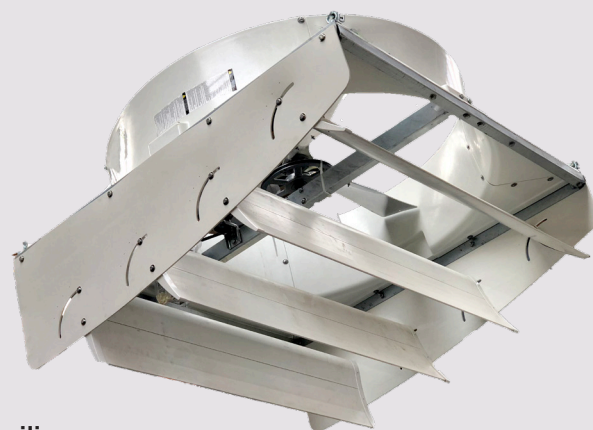

Arctic Air Blast Fans raise the bar in quality, aesthetics, performance, and price! The Arctic Air Blast collection creates a high-speed cooling wave of air across the barn's floor. These high efficiency fans are ideal for cooling animals and people, drying floors, insect control, and delivering fresh air.

The Arctic Blast's state-of-the-art blade design is geared for performance, durability, and optimal air throw. Sealed motor and shaft bearings reduce required fan maintenance. The SMC fiberglass, aerodynamically shaped housing, allows for tighter blade clearance with reductions in air drag and noise. This new fiberglass material increases the fan's strength and performance, making your barn more efficient.

FEATURES

- Creates a wave of air that surrounds the cows 360° while standing or lying
- Use during winter months on minimum setting to de-stratify and displace stagnant air pockets
- Housing and louvers constructed of robust fiberglass
- Cools the production animals, staff, and bedding
- Quiet operation with low energy consumption
- Multiple installation configurations: an existing building column, an anchored post, or suspended from ceiling
- Reduces heating and cooling costs up to 50%
- 3 Year Manufacturer's Motor Warranty
